

MULTI-CROP USE

Fortress

Fortress is a liquid biostimulant built on vinasse, amino acids, and key micronutrients. It is designed to reduce flower abortion, improve uniformity, and help crops push through stress during critical growth stages. With bioactive compounds that activate plant metabolism, Fortress sets the foundation for strong yields.

KEY BENEFITS

- Reduces flower abortion and improves stand uniformity
- Enhances nutrient use efficiency for stronger growth
- Mitigates stress from drought, frost, and heat
- Supports plant metabolism to process and recover from chemical stress (herbicide applications)

IMPACT ON THE PLANT

- Promotes consistent flowering and pod/seed set
- Supports efficient nutrient uptake and crop metabolism
- Maintains yield potential under stress conditions

APPLICATION

16-32 OZ / ACRE

Corn
V2–V6 to support vegetative growth and early reproductive potential

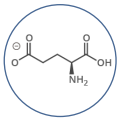

Soybeans
R1–R2 (early flowering)

Wheat/Small Grains
Tillering to flag leaf

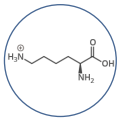

PACKAGING

- 2.5 gal

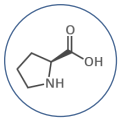

KEY AMINO ACIDS

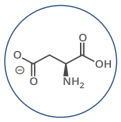

Glutamic Acid
Chelates Micronutrients

Lysine
Heat Stress Tolerance

Proline
Drought Stress

Aspartic Acid
Cold & Salt Stress
