

MULTI-CROP USE

TS601

TS601 is an EPA-registered solution designed to strengthen your disease management program from day one. When applied at planting, it delivers season-long protection against key soilborne and foliar fungal pathogens, helping safeguard early vigor and crop performance.

KEY BENEFITS

- Provides season-long protection when applied at planting against both soilborne and foliar fungal pathogens.
- Helps reduce the need for rescue sprays throughout the season.
- Works within the plant from time of planting to maturity to provide season long disease suppression

IMPACT ON THE PLANT

- Significant reduction in disease severity and progression on key pathogens
- Statistically significant increased yield on par with the standard chemical control under heavy Pythium pressure
- Reduced incidence and onset of disease
- Equivalent performance to chemical control

EPA-REGISTERED DISEASES

Soybeans
- Damping Off
- White Mold
- Root and Stem Rot
- Sudden Death

Cotton, Peanut
- Damping Off
- Fusarium Wilt
- Root and Stem Rot
- White Mold

Corn
- Southern Rust
- Tar Spot
- Fusarium Wilt

APPLICATION

0.1 OZ PER 100 LB SEED

Seed Coat

To mix when using with other chemical insecticide or fungicide seed treatments: first add the chemical insecticides or fungicides to the slurry mix with approximately 10% of the required water. Slowly add the TS601® to the slurry until a suspension is obtained. Add the remainder of the water and maintain continuous agitation. Do not store mixed slurries for more than 4 hours.

To mix when using only TS601® seed treatment: Add all of the required water to TS601® and mix until a suspension is obtained. Maintain continuous agitation. Do not store mixed slurries for more than 4 hours.

See label for more information.

PACKAGING

- 15 OZ
